

## Appendix C: PART Measures Not Directly Reported in Guidance

Under OMB's Program Assessment Rating Tool (PART) review, programs are required to develop long term and annual performance measures. Each program is required to develop at least one efficiency measure, one to two long-term measures, and two more annual measures. Most of the measures developed through the PART process over the past four years have been based on Strategic Targets from the 2003 *Strategic Plan* and/or Program Activity Measures from the *National Program Guidance*. The PART efficiency measures are not directly reported in the FY 2007 *Guidance*. The national program will, however, report these measures using program data derived from measures in the *Guidance* and dividing by the dollars invested.

### PART Efficiency Measures

Program	Term	Measure
Drinking Water State Revolving Fund (DWSRF) / Public Water System Supervision (PWSS) / Underground Injection Control (UIC)	Long-Term	People receiving drinking water in compliance with health-based drinking water standards per million dollars (Federal and State).
DWSRF / PWSS	Long Term	Dollars per community water system in compliance with health-based drinking water standards.
DWSRF	Annual	Average funding (in millions of dollars) per project initiating operations.
Nonpoint Source	Long Term	Section 319 funds (\$ million) expended per partially or fully restored waterbody.
Mexico Border	Long Term	Additional people served per million dollars (U.S. and Mexico).
National Estuary Program/ Marine Pollution	Annual	Program dollars per acre of habitat protected or restored.
Pollution Control Grants (106)	Annual	Cost per water segment restored.
Surface Water Protection	Annual	Loading (pounds) of pollutants removed per program dollar expended.

### PART Annual Measure

The Underground Injection Control Program includes an annual PART measure related to the compliance of community water systems. An overall compliance rate for community water systems is not reported under the current *Strategic Plan* because the rate is presented for regulations issued before or after 2002. EPA will report the overall number using data from the Safe Drinking Water Information System (SDWIS) in FY 2006 and 2007. EPA is proposing to change the measures in the new *Strategic Plan* to include a single, overall community water system compliance rate and will report that rate under the new *Plan* starting in FY 2008.
